

MANAGING SAFELY

A new IOSH Managing Safely in Social Housing course has been developed by RRC. Based on the existing IOSH Managing Safely program, the course is designed for those who manage others, and who manage risks and resources in the social housing sector.

The course has two main learning aims:

To give managers and supervisors an understanding of everyone's safety and health responsibilities in the social housing sector. To enable managers and supervisors to recognise how they can influence, control and monitor risk, improving safety and health issues in the social housing sector.

There are no prerequisites for the course, so it is suitable for anyone in a management role in the social housing sector.

ONE-DAY NOISE AWARENESS COURSE

Pulsar Instruments has announced dates for its one-day noise awareness course in 2020.

The course is suitable whether you are new to noise measurement or in need of a refresher on your responsibilities under the Noise at Work Regulations.

It aims to raise awareness of noise

as a risk, increase safety practitioners' knowledge of how to monitor noise and encourage safer behaviour and correct use of hearing PPE.

Attendees come away knowing what they need to measure, when they need to measure it and how to use a sound level meter or dosimeter. They also have an

opportunity to look at how to analyse data and make HSE-compliant reports.

2020 dates are: 18 March, York; 9 June, Birmingham; 16 Sept, York.

Book before 23 December 2019 and pay £199 pp +vat (normal price £265 pp +vat).

POLISHING AND GRINDING MACHINES

In response to industry demand for machines that meet the latest health and safety requirements, **Surtech** has partnered with one of Europe's leading manufacturers of polishing,

grinding and finishing equipment.

The new machines benefit from modern guarding, electrical specifications and controls, after-sales service and spare parts support. The range extends from bench to pedestal machines, covering all the most common power ratings in both 400V 3 phase and 230V single phase.

Extras include twin speed motors, emergency injection motor brakes, electronic inverter speed controls and built-in dust extraction units. There are products to cover the needs of small workshops and those with production shift work operations. Warranties are from 3 to 10 years, depending on model.

Various machines can be tested at Surtech's demo and test centre in Birmingham

SLIMLINE SOLENOID INTERLOCK

The AZM150 from the **Schmersal Group** is a new electromechanical solenoid interlock that is characterised by its slimline design and 1400 Newton interlocking force.

The AZM150 solenoid interlock can be combined with three different actuators: a straight actuator for sliding doors, an angled actuator for large revolving doors and a movable actuator for smaller, revolving doors.

Its rotating actuator head can be locked simply by putting the lid on rather than a screw fitting. The rotating actuator head has two feeder slots to enable a range of installation positions and approach options.

The interlock comes with a low coding level as standard; high coding level is an option.

The AZM150 is especially suited to small machines and to packaging machines and machine tools. It is available in operating current and standby current variants.
